▲ AK20 Battery & AL101 Charger. † AK30 Battery & AL101 Charger. ■ AP200 Battery & AL300 Charger. ● AP300 Battery & AL300 Charger. *Claim based on BIS Shrapnel Report 2017. # Includes recommend battery, bar & chain. **The battery life durations and area specifications are estimates and may vary depending on how the tool is being used and what is being cut. Example with recommended battery when sawing square timber (10 x 10 cm).

STIHL®

CHOP LIKE A PRO!

Discover the tricks of the trade with four time STIHL TIMBERSPORTS® World Champ, Brad De Losa.

HOW TO CUT YOUR FIREWOOD WITH A CHAINSAW

1

To reduce the amount of lifting required, I like to cut the log down to one metre in length, ensuring the log doesn't roll away before I start cutting.

TIP: Saw three-quarters of the way through then roll the log and complete the cut. This stops you cutting into the ground which will make your chain blunt.

2

For a log 20-25cm in diameter I like to make four cuts down its entire length leaving the centre attached. That way you make sure you don't accidentally saw into the ground.

TIP: Make sure you secure the log each time you rotate it through a ¼ turn so that it doesn't roll away.

3

Once all four cuts are completed, you can then prise the log apart using an axe or lever.

4

Next you'll need to saw the pieces into the right length for your fireplace, I'd recommend no longer than 30-40cm to make carrying and stacking easier.

TIP: The easiest way to do this is to use a sawhorse. This allows you to position the wood securely away from the ground and means that you don't need to bend over when sawing.

“ Travelling the world with STIHL TIMBERSPORTS® is an amazing experience, but when it comes to chopping firewood I like to keep the physical exertion for the main stage. Here are my handy tips to help you chop or saw like a champion and keep the family warm this Winter. ”

- Brad De Losa, STIHL TIMBERSPORTS® Athlete

Visit stihl.com.au to see the full range of Chainsaws & Axes

HOW TO CHOP YOUR FIREWOOD WITH AN AXE

1

Place the log on its end on a flat even surface. I like to use a larger log as a chopping block to make it easier.

2

Stand with your feet slightly apart, start with the axe resting on the top of the log exactly where you want to split it.

TIP: Start in line with the grain or at a visible crack; this will make the effort needed to split the log less.

3

Lift the axe directly over your head and swing down trying to use your whole body and legs to create power.

TIP: Do not swing over your shoulder as this could cause the axe to scoop off and miss.

4

Repeat steps 1-3 until the log is split into manageable sized pieces to fit into your wood stack ready for your fireplace, pit or stove.

DON'T FORGET!

Stack the logs so that air can circulate between them, drying is important as damp wood will not burn properly and causes excess smoke.

Always wear the correct Personal Protective Equipment and follow the correct operating instruction as recommended in the owner's manual of your product.
